user:user1:rw-  
group::r--  
mask::rw-  
other::r--  
[user1@redhat]~  
$ _
```

11-

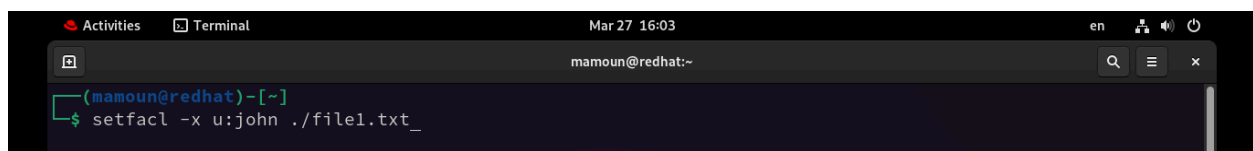

A terminal window titled 'Terminal' with the date 'Mar 27 15:57' and language 'en'. The prompt is 'mamoun@redhat:/home/user1'. The user enters 'sudo groupadd developers'. The system prompts for a password, which is rejected twice. Then, the user enters 'setfacl -m g:developers:x /home/mamoun/Documents/'. The user then enters 'getfacl /home/mamoun/Documents/'. The output shows the file's permissions: removing a leading '/' from absolute path names, owner 'mamoun', group 'mamoun', user permissions 'rwx', group permissions 'r-x', group 'developers' permissions '--x', mask permissions 'r-x', and other permissions 'r-x'.

```
(mamoun@redhat)-[/home/user1]
$ sudo groupadd developers
[sudo] password for mamoun:
Sorry, try again.
[sudo] password for mamoun:
(mamoun@redhat)-[/home/user1]
$ setfacl -m g:developers:x /home/mamoun/Documents/
(mamoun@redhat)-[/home/user1]
$ getfacl /home/mamoun/Documents/
getfacl: Removing leading '/' from absolute path names
# file: home/mamoun/Documents/
# owner: mamoun
# group: mamoun
user::rwx
group::r-x
group:developers:--x
mask::r-x
other::r-x

(mamoun@redhat)-[/home/user1]
$
```

12-

A terminal window titled 'Terminal' with the date 'Mar 27 16:03' and language 'en'. The prompt is 'mamoun@redhat:~'. The user enters 'setfacl -x u:john ./file1.txt_'.

```
(mamoun@redhat)-[~]
$ setfacl -x u:john ./file1.txt_
```

13-

```

(mamoun@redhat)-[~]
$ ls -ld my-dir/
drwxr-xr-x. 2 mamoun mamoun 6 Mar 27 16:06 my-dir/
(mamoun@redhat)-[~]

(user1@redhat)-[/home/mamoun]
$ sudo yum update

We trust you have received the usual lecture from the local System
Administrator. It usually boils down to these three things:

    #1) Respect the privacy of others.
    #2) Think before you type.
    #3) With great power comes great responsibility.

[sudo] password for user1:
[sudo] password for user1:
```

```

## systems).
## Syntax:
##
##      user    MACHINE=COMMANDS
##
## The COMMANDS section may have other options added to it.
##
## Allow root to run any commands anywhere
root    ALL=(ALL)        ALL
user1    ALL=(ALL)        /bin/yum

## Allows members of the 'sys' group to run networking, software,
## service management apps and more.
# %sys ALL = NETWORKING, SOFTWARE, SERVICES, STORAGE, DELEGATING, PROCESSES, LOCATE, DRIVERS

## Allows people in group wheel to run all commands
%wheel   ALL=(ALL)        ALL

## Same thing without a password
# %wheel   ALL=(ALL)        NOPASSWD: ALL
%developers ALL=(ALL)        NOPASSWD: ALL
#Allows members of the users group to mount and unmount the
## cdrom as root
# %users   ALL=/sbin/mount /mnt/cdrom, /sbin/umount /mnt/cdrom

## Allows members of the users group to shutdown this system
# %users   localhost=/sbin/shutdown -h now

-- INSERT --
